

## **NEW ION BLOWER CUTS ACROSS INDUSTRY BARRIERS**

Arrowquint announce the introduction of the new Eltex R35 depth effect ion blower to supplement its successful R55 blowers which are used extensively in the printing and plastic processing industries.

The R35 operates at air pressures up to 6 bar and is available with either a wide, shallow fishtail nozzle for maximum coverage at low velocity, or a round nozzle for high velocity, focused applications.

Unlike previous Eltex ion blowers, ionisation takes place in the body of the R35 blower, giving high discharging performance close to the nozzle as well as at long range.

Typical applications for the R35 include:

Improved mixing in masterbatch dosing units

Improving production in tablet packing

Separating cover films for LCD displays

Cleaning small components during assembly

Separating paper and film sheets for feeding.

More details on the R35 ion blower and other Eltex static control products can be obtained from exclusive UK/Eire Agent, Arrowquint Ltd.
