

NEW EX POWER UNIT OFFERS HIGHER CAPACITY FOR WIDER WEBS

Eltex have recently introduced a new ES54 power supply unit for their 'depth effect' EX rated discharge systems. UK Agents, Arrowquint say that the new ES54 has 3 times the capacity of the current ES53 model, making it ideal for wider web machines with multiple coating or printing units. The ES54 power unit offers 2 HV outputs and malfunction warning facility for continuous safe operation. It is compatible with both the Eltex EXR50 electrodes and EXR55/EXPR55 ionisation blowers and pistols.
